

UTSAV CHAUDHARY

Texas | utsavmaan28@gmail.com | (607) 296-9583 | thatinsaneguy.com | in/utsavmaan28 | github/UttU28

Professional Summary

Senior Fullstack Developer with ~6 years of experience building scalable end to end web applications, **robust ETL pipelines** and **AI driven automation systems**. Skilled in modern frontend frameworks including **React.js**, **Next.js**, **TypeScript**, and **TailwindCSS**, paired with robust backend development using **Node.js (Express)**, **Python**, **FastAPI** and large scale data processing with **Spark (Databricks)**. Extensive experience designing, developing and deploying ML, DL and **GenAI** solutions. Specialize in training, integrating and productionizing RAG, Agentic Harness, Speech Synthesis. Cloud agnostic, Adept at designing secure, high performance, cloud native systems with real time data processing, analytics dashboards, and multi channel automation across web and content platforms.

Technical Skills

Programming & Frameworks: Python, JavaScript, TypeScript, React.js, Next.js, Node.js (Express), FastAPI, Flask, Django, HTML5, CSS3, TailwindCSS, Redux

Data Engineering & Analytics: Azure Databricks, Apache Spark (PySpark, Spark SQL), Delta Lake, Pandas, ETL/ELT Pipelines, Data Ingestion, Data Curation; Snowflake (SQL warehousing, stages, views, schema design, working knowledge); D3.js, Chart.js

Databases: PostgreSQL, MongoDB, Azure SQL Database, DynamoDB, AWS RDS, Redis, Firebase, Firestore, Vector Store, Opensearch, Pinecone

Cloud Platforms: Microsoft Azure (App Services, ContainerApps, Azure functions, AKS, Azure DevOps), AWS (EC2, EKS, Lambda, RDS, Glue, SQS, Amplify), Google Cloud Platform (Big Query, Vertex AI)

DevOps & CI/CD: Git, GitHub, Bitbucket, Docker, Kubernetes, Terraform, Jenkins, Ansible, GitHub Actions, Bitbucket Pipelines, AWS CodePipeline, Azure DevOps, Nginx, Cron

Security & APIs: OAuth 2.0, gRPC, REST APIs, OpenAPI, Swagger, WebSockets, GraphQL, PCI compliant integrations

Tools & Collaboration: Jira, Selenium, Kafka, FFMPEG, Bash, PowerShell, Linux (Debian, RedHat), Windows, macOS

Professional Experience

Senior Fullstack Developer

Jan 2024 - Present

Labs196, TX

- Built secure **React.js** and **Next.js** applications with **TypeScript** and **TailwindCSS**, including an internal Admin Portal for sales KPI tracking; translated **Figma** designs into production UI with performance tuned component patterns.
- Developed **Python** backend micro services and **Node.js REST APIs** for near real time data processing, mapping unstructured data with semi structured data in MongoDB
- Implemented **Python ETL** jobs to extract, transform, and load operational data from **Databricks** into reporting ready datasets consumed by internal dashboards and stakeholder exports.
- Integrated third party services including **Stripe** (payments), **HubSpot** (CRM), and **Sumsu** (KYC/AML) via SDKs and **REST APIs**, supporting secure, **PCI compliant** workflows across the full stack.
- Designed a dual database architecture combining **MongoDB** for primary data storage and **Firebase** for authentication and real time state, with schemas tuned for reporting and operational queries.
- Developed and maintained **CI/CD pipelines** using **Git**, **Bitbucket**, and **AWS Amplify**; containerized backend services with **Docker** on **AWS EKS** for automated, repeatable deployments.
- Owned production support for live services, triaging defects and shipping fixes while upholding security and code quality standards across the stack.
- Collaborated with QA, product, and sales teams via **Jira** to prioritize feature work and production defects in a fast paced environment with shifting priorities.

Key Achievements:

- Reduced deployment time by **40%** through **Next.js** architecture and automated **CI/CD** pipelines.
- Sustained **94% SLA resolution rate** on production issue triage through close QA collaboration across teams.
- Delivered dual database architecture improving system scalability, data consistency, and reporting readiness across the platform.

Python Developer CO-OP

June 2023 - Dec 2023

Shell USA, Inc., TX

- Built **Python/FastAPI** services with **REST APIs**, authentication, and throttling behind **Azure API Management** for low latency inference on **Azure AKS**.

- Developed **React.js** analytics dashboards with **D3.js** and granular **RBAC** for internal teams and client stakeholders, translating analyst requirements into actionable UI workflows.
- Built and ran **Azure Databricks PySpark** notebooks and **Spark SQL** jobs to ingest, cleanse, and transform batch datasets; enforced deduplication, partitioning, and schema validation before loading curated tables into **PostgreSQL** and **MongoDB**.
- Engineered **ETL** pipelines on GPU backed **Azure AKS** with **Python** and **Pandas**, orchestrating Spark workloads and fine tuning **Llama 3.2** inference endpoints with data science teams.
- Prototyped **Snowflake** warehouse tables and analyst facing **SQL** views over curated pipeline outputs; optimized **Azure Database for PostgreSQL** and **MongoDB** indexing for dashboard and reporting performance.
- Integrated **Fireblocks SDK** and **Metamask** into a unified **React** dashboard with secure on chain interactions via **Azure Functions**, supporting financial transaction monitoring use cases.
- Deployed company web platform on **Next.js** and **Azure App Service** with **RBAC** and scalable API integrations across the **Azure** cloud stack.
- Managed **Git/CI/CD** with **Azure DevOps** pipelines for automated build, test, and release; collaborated with product owners and developers to deliver timely stakeholder support.

Key Achievements:

- Curated multi source datasets through **Azure Databricks/Spark**, delivering analytics ready tables that powered **FastAPI** services and **React.js** dashboards.
- Deployed **FastAPI** inference on **Azure AKS** and **API Management** with auth and throttling controls, reducing average API latency to under **250ms**.
- Automated **Next.js**, **Azure App Service**, and **Python** releases through **Azure DevOps**, accelerating delivery cycles for stakeholders by **35%**.

Python/Web Developer

June 2021 - July 2022

Compendious Medialabs Pvt. Ltd., IN

- Built a responsive **React** frontend on a **FastAPI** backend, delivering interactive **D3.js** and **Chart.js** metrics dashboards that improved data visualization efficiency by **45%**.
- Optimized **Python/FastAPI** services with **Pydantic** models and **REST** endpoints, sustaining **250ms** average response times for analytics workloads.
- Built **Python** scraping/ETL with **Selenium**, **BeautifulSoup**, and **Pandas**, cutting manual collection time by **60%**.
- Implemented **WebSocket** driven real time metric streaming for high frequency datasets, keeping operational dashboards continuously up to date.
- Refined **React** state management and **SQL** data curation workflows to improve performance and reporting ready for analytics.

Key Achievements:

- Shipped full stack **React/FastAPI** analytics platform with **45%** faster visualization and **250ms** API response times.
- Automated structured and unstructured data ingestion, reducing manual collection effort by **60%**.

Software Engineer

March 2020 - Sept 2020

VRoKCs, MO (Remote)

- Partnered with ML engineers on a **Sign Language translation pipeline**, supporting **data collection**, **annotation**, and **dataset preparation** with automated **Python** preprocessing.
- Built a **Flask** web app (**Python**, **HTML5**, **CSS3**, **JavaScript**) with **TensorFlow Lite** for real time, in browser model evaluation via **image upload** and **webcam streaming**.
- Connected the ML pipeline to **Unity3D**, enabling live ASL translation inside **Augmented Reality** environments for stakeholder demos.
- Tuned inference latency and data quality checks for responsive in-browser live prediction demos.

Key Achievements:

- Delivered a full **Python/Flask** demo app for real time sign language model evaluation in the browser.
- Integrated the ML pipeline with **Unity3D** AR, demonstrating live translation to project stakeholders.

Web/Game Developer

March 2019 - Aug 2019

underDogs Gaming Studios, IN

- Integrated the **Quarters API** across multiple titles, enabling universal gaming currency transactions, player wallets, and secure points to Quarters conversions.
- Optimized real time client/server flows in **Python** and **C#**, improving transaction reliability across payment failures and network drop edge cases.
- Built **POC** modules linking **payments**, **inventory**, and **shipping** into a unified transaction layer within **Unity3D**.
- Applied API best practices with unit and integration testing to harden secure transaction methods for production releases.

Key Achievements:

- Unified currency transactions across multiple games via **Quarters API**, reducing payment friction between titles.
- Shipped **POC** modules connecting payments, inventory, and shipping into a single transaction workflow.

Projects

LinkedIn Reverse Search Platform

Client Project linkitup.thatinsaneguy.com

- Built a **data enrichment platform** in **Python** using **Pandas** and **Selenium** to extract LinkedIn profiles and verified emails from unstructured sources, processing **1000+ records per batch**.
- Developed a **Next.js** and **React.js** frontend with drag and drop Excel upload, real time progress indicators, and interactive data tables for analyst workflows.
- Architected a multithreaded **ETL** pipeline orchestrated with **n8n**, integrating scraping, SalesQL APIs, **Redis** caching, and **MongoDB**; reduced repeat request time by **45%**.
- Enabled analytics dashboards with **Chart.js** and **D3.js**; deployed with **Docker** and **CI/CD (GitHub Actions)** maintaining **99.5% uptime**.

BrownMailer: Full Stack Data Ingestion Platform

Personal Project youtube/demo

- Built an end to end platform with **Flask (Python)** backend and **Jinja2** templating (**HTML5, CSS3, JavaScript**) for high volume structured data ingestion, processing **500+ records daily** and **10,000+ monthly**.
- Engineered multi source **ETL** pipelines using **Selenium** and **BeautifulSoup** to extract, filter, and normalize external data into **SQL** stores with **Redis** caching and deduplication logic.
- Delivered server rendered operational dashboards with **Jinja2** templates for real time pipeline tracking, interaction history, and throughput analytics, giving stakeholders visibility into ingestion and workflow status.
- Deployed containerized **Flask** services with **Docker**, automated **CI/CD**, and concurrent batch processing, maintaining **99.8% uptime** under sustained load.

Education

State University of New York at Binghamton

Master of Science in Computer Science

3.44/4.00 GPA

Certifications

- **Microsoft Certified: DevOps Engineer Expert** (AZ-400: Designing and Implementing Microsoft DevOps Solutions) [View Credential](#)
- **Microsoft Certified: Azure Fundamentals** (AZ-900)
- **Google IT Automation with Python** Specialization [View Credential](#)
- **DeepLearning.AI TensorFlow Developer** Specialization [View Credential](#)
