Dear Hiring Team,

I am a Senior DevOps Engineer with 5+ years supporting production-grade AWS and Azure infrastructure in regulated and enterprise environments. I am writing to express my interest in joining your team and contributing to the platform work that keeps your product reliable, secure, and easy to ship.

In my current role at **Labs196**, I work on the platform team supporting a multicloud lab and research environment. Day to day I help run **EKS and AKS** with **Helm, Terraform, Argo CD** GitOps, **Rancher**, and observability across Dev through Production in **GxP-validated** environments. Before that, at **Delta Dental**, I supported production **AKS** for healthcare claims and enrollment workloads. There I contributed to monitoring improvements that cut **MTTD from 30 minutes to 5**, **canary releases** through **Azure DevOps** and Application Gateway that reduced deployment incidents by about **75%**, and **DR automation** for Azure SQL targeting **RPO 10 minutes** and **RTO 30 minutes**. I am comfortable in both fast-moving startup settings and compliance-heavy production environments.

I do my best work when reliability, observability, and safe releases are treated as product features, not afterthoughts. I would be glad to help harden pipelines, improve on-call and incident response, and build platform foundations that scale as the team grows.

Outside of work, I stay sharp by building and running my own systems. Highlights from my portfolio (thatinsaneguy.com):

- **Apeksha Home Lab** (apeksha.thatinsaneguy.com): self-hosted stack with Docker Compose, nginx, Certbot TLS, one-command deploy scripts, FastAPI health dashboard, and a Kubernetes lab on kind.
- **LinkedIn Reverse Search** (linkitup.thatinsaneguy.com): Python data pipeline with Docker and GitHub Actions CI/CD.
- **AI Video Pipeline** (meme.thatinsaneguy.com): automated ML and FFMPEG pipeline with Docker and scheduled publishing. YouTube: @ThatInsaneGuy.

Certifications: **Microsoft Certified: DevOps Engineer Expert (AZ-400)**, **Azure Fundamentals (AZ-900)**, **Google IT Automation with Python**.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my platform experience and hands-on project work can support your team.

Best regards,
Utsav Chaudhary
